Girish T

Data Analyst • SQL • Power BI • DAX • Python • Excel
Bangalore, India | +91 9008478215 | girish.t2004@gmail.com | LinkedIn | GitHub | Portfolio

Summary

Data Analyst with a Bachelor of Engineering in Computer Science and Data Science and project experience in SQL, Power BI, DAX, and Python, skilled in data extraction, data cleaning, data validation, KPI development, and dashboard reporting. Analyzed sales, customer, and transaction datasets of up to 367K+ records, building SQL analytical datasets with CTEs, joins, and window functions and interactive Power BI dashboards. Strong foundation in data modelling, star schema design, exploratory data analysis, customer and sales analytics, and Agile/Scrum, with a focus on turning data into actionable business insights.

Education

R.L. Jalappa Institute of Technology 2022 – 2026
Bachelor of Engineering in Computer Science and Data Science *CGPA: 7.3/10*

Projects

E-commerce Sales and Customer Analytics | *SQL, Power BI, DAX, Power Query, Python*
- Delivered an executive view of INR 158.8M net sales, 23.39% profit margin, and 0.57% return rate across 150K orders and 25K customers by building SQL metrics with CTEs, joins, and window functions and a three-page Power BI dashboard with DAX KPIs.
- Ensured reporting accuracy across 367K+ order items by running SQL integrity checks for NULLs, duplicate keys, discount ranges, referential integrity, and orphaned returns before building the report.
- Revealed that about 49% of customers fall in the "At Risk" RFM segment, a clear retention opportunity, by building NTILE-based RFM scoring in SQL.
- Identified Grocery as the top category (INR 19.5M net sales) and enabled month-over-month growth tracking by using LAG window functions and a star schema with a date table in Power BI.

Customer Churn Analysis | *SQL, Power BI, DAX, Power Query, Data Modelling, Agile/Scrum*
- Identified a 20.37% churn rate (2,037 of 10,000 bank customers) by validating all 14 columns in SQL (zero NULLs, no duplicate IDs) and defining DAX KPIs for churned, retained, active, and inactive customers.
- Pinpointed Germany as the highest-churn market (32.4% versus about 16% in France and Spain) by segmenting churn by geography, age group, and number of products in SQL.
- Flagged customers holding 3 to 4 products churning above 80% and a November exit peak of 307 customers by building an interactive Power BI dashboard with slicers, KPI cards, and drill-down views, published to Power BI Service.
- Kept delivery organized through Agile/Scrum practices, including sprint planning, daily Scrum, blocker tracking, and sprint reviews.

UPI Fraud Analysis | *Python, Pandas, NumPy, Matplotlib, Seaborn*
- Identified higher-risk transaction categories by calculating fraud rates across transaction types in an exploratory analysis of 60K+ UPI transactions.
- Exposed fraud patterns by engineering features from sender and receiver balance differences and transaction amount transformations.
- Highlighted the Top 15 senders and Top 10 receivers by activity and visualized amount distributions of fraudulent transactions using statistical summaries, Matplotlib, and Seaborn.

Cinema Analytics (IMDb Movies) | *Python, Pandas, Matplotlib, Seaborn*
- Prepared 871 analysis-ready records from a 1,000-movie IMDb dataset by removing 128 records with missing revenue and 1 record with invalid revenue, and dropping unused columns, using Pandas.
- Found that 185 of 871 movies (21%) fall in the High engagement tier (rating above 7.5) and 676 in Medium, by building a rating-based engagement classification.
- Revealed that average movie revenue peaked at about INR 9.2B in 2009 and fell to about INR 4.5B by 2016, by converting revenue to INR (fixed rate of 82) and analyzing yearly averages across 2006 to 2016.
- Explored relationships between runtime, rating, and revenue and ranked the top 10 genres by average revenue, using a correlation heatmap, histograms, box plots, and bar charts in Matplotlib and Seaborn.

Technical Skills

SQL and Databases: SQL Server, MySQL, Joins, CTEs, Subqueries, Window Functions, Aggregations, Views, Data Validation
Data Visualization: Power BI, DAX, Power Query, Power BI Service, Data Modelling, Star Schema, KPI Development, Drill-Down Analysis
Analytical Programming: Python, Pandas, NumPy, Exploratory Data Analysis, Data Cleaning, Statistical Analysis
Data Engineering (learning): Microsoft Fabric, Data Pipelines, Lakehouse
Tools and Methods: Excel, Git, GitHub, Agile, Scrum

Achievements

Hackathons: Participated in 2 hackathons, one at SJBIT and the other at Atoms
