PROFESSIONAL SUMMARY

Computer Science and **Engineering** and Data Science with Project experience in SQL, Power BI and Python, skilled in data extraction, transformation, validation and analytical reporting. Experienced in analyzing customer, sales and transactional datasets, developing KPI-driven dashboards using DAX and Power BI, and performing data-quality checks to ensure accurate business reporting. Strong foundation in customer and sales analytics and Agile/Scrum project practices, with a focus on translating complex data into actionable business insights.

TECHNICAL SKILLS

SQL & Databases: SQL Server, MySQL, Data Extraction, Data Manipulation, Joins, CTEs, Subqueries, Window Functions, Aggregations, Views, Data Validation

Data Visualization: Power BI, DAX, Power Query, Power BI Service, Data Modelling, Star Schema, Fact & Dimension Tables, KPI Development, Dashboard Development, Drill-Down Analysis, Interactive Reporting

Analytical Programming: Python, Pandas, NumPy, Exploratory Data Analysis, Data Cleaning, Data Transformation, Statistical Analysis

Data Engineering: Microsoft Fabric, PySpark, Data Pipelines, Lakehouse

Tools & Methodologies: Excel, Git, GitHub, Agile, Scrum, Sprint Planning

---

PROJECTS

E-COMMERCE SALES & CUSTOMER ANALYTICS

SQL | Power BI | DAX | Power Query | Python

- Analyzed **150K+ orders, 367K+ order items, 25K customers, 100K reviews and 15K** returns to evaluate sales, customer and product performance.
- Developed SQL analytical datasets using CTEs, joins, aggregations and window functions to calculate gross sales, discounts, net sales, tax and return metrics.
- Performed data profiling and validation across transactional, customer, payment and return datasets to ensure reporting accuracy.
- Developed monthly performance analysis to evaluate sales trends, order volume, average order value and return behaviour.
- Built Power BI dashboards with DAX KPIs, interactive filtering, customer segmentation and time-based analysis.
- Designed analytical relationships between transactional and dimensional data to support scalable reporting.

CUSTOMER CHURN ANALYSIS

SQL | Power BI | DAX | Power Query | Data Modelling | Agile/Scrum

- Analyzed 10,000 customer records, identifying 2,037 exit customers and calculating an overall 20.37% churn rate.

- Performed SQL-based data profiling, validation and discrepancy analysis to identify missing and invalid customer attributes before dashboard development.
- Developed DAX measures and business KPIs for total customers, active customers, inactive customers, retained customers, exit customers and churn rate.
- Built an interactive Power BI dashboard with dynamic slicers, KPI cards, trend analysis, drill-down views and customer segmentation.
- Analyzed customer attrition across geography, gender, credit-card status, customer category, year and month to identify high-churn segments.
- Performed month-over-month churn analysis, comparing current exit customers with previous-month customer attrition patterns.
- Applied dimensional modelling and fact/dimension relationships to support interactive KPI reporting.
- Followed Agile/Scrum practices, participating in sprint planning, daily Scrum discussions, blocker tracking and sprint reviews throughout the project lifecycle.

UPI FRAUD ANALYSIS

Python | Pandas | NumPy | Matplotlib | Seaborn

- Performed EDA on **60K+ UPI transactions** to identify patterns associated with fraudulent activity.
- Engineered transaction-level features using sender/receiver balance calculations and transaction amount transformations.
- Analyzed fraud prevalence and calculated fraud rates across transaction types to identify higher-risk transaction categories.
- Identified the Top 15 senders and Top 10 receivers based on transaction activity.
- Used statistical summaries and visualizations to analyze transaction amount distributions and fraudulent transaction patterns.
- Applied Pandas and NumPy for data cleaning, transformation, aggregation and analytical exploration.

EDUCATION

Bachelor of Engineering — Computer Science & Data Science

R.L. Jalappa Institute of Technology
2022 – 2026
